

A PROPOSAL FOR TEL AVIV-YAFO MUNICIPALITY

The city already built the places.

NestUp helps the families in them
find each other.

Municipal community pilot · 2026

**You can live on a street with
four hundred families
and know none of them.**

THE MOMENT IT MATTERS MOST

When you become a parent, your city gets smaller.

Your world narrows to the distance you can push a pram. The people you used to see disappear into work and evenings. The park is full of people in exactly your situation — and none of you speak.

TODAY

Everything exists. Nothing connects.

WhatsApp groups

Invite-only. You have to already know someone to get in.

Facebook groups

Noisy, city-wide, and rarely about your street.

Municipal listings

Excellent programmes that parents never see.

Word of mouth

Works beautifully — if you already have a network.

Four channels. None of them designed for a parent standing in a park on a Tuesday morning.

**Parents don't need
more information.
They need each other.**

NESTUP

One map of your neighbourhood.

Activities other parents are hosting. Places the city has verified. Events the municipality already runs. In one view, sorted by how close they are to you right now.

- Activities — created by parents
- Places — verified, family-ready
- Events — from the city

Three layers of a neighbourhood.

Activities

A parent decides to be at the playground at ten and says so. Others join.

21 categories
Created by residents

Places

Verified, family-ready public space — shade, fencing, toilets, stroller access.

44 verified in Tel Aviv
Curated, not crowdsourced

Events

Story hours, workshops and programmes the municipality already runs.

From municipal sources
Now with people attached

The city supplies two of these three layers already.

WHERE THE CITY ALREADY WINS

A great programme with eight people in it is still a great programme.

Municipal story hours, workshops and family programmes are genuinely good. The hard part was never the programming — it's that a parent has no reason to believe anyone else will be there.

Attendance is a community problem, not a marketing problem.

THE MECHANIC

One tap turns a listing into a gathering.

01

A city event appears

Pulled from municipal sources into the same map as everything else.

02

A parent says "I'm going"

Visible to other NestUp parents. Never sent to the organiser as a registration.

03

Others see people, not text

"7 NestUp parents going" — the strongest reason to attend anything.

04

They meet in physical space

The value lands in the park, the library, the community centre. Not in the app.

Success is measured in the park, not in screen time. We are not trying to keep anyone in the app.

BETWEEN THE MEETUPS

Community isn't only an event.

Twelve curated community spaces run continuously — sleep, feeding, development, daycare, local recommendations. Always there between the meetups, in Hebrew and English.

Baby Sleep

Breastfeeding

First-Time Parents

Daycare & Preschools

Local Recommendations

Parental Leave

TRUST

Built for parents, so built carefully.

A public profile shows enough to feel safe meeting someone, and nothing more.

SHOWN

First name and photo

General area — never an address

Mom / Dad / Parent, self-selected

Number of children, not their names

NEVER SHOWN

Phone number

Email address

Home address or coordinates

Children's birthdates

THE MUNICIPAL CASE

Four things a city gets.

Isolation

Parental isolation is a wellbeing issue the city already cares about — and one it currently has no instrument for.

Utilisation

Better attendance at programmes and public spaces the city has already paid to build and run.

Belonging

Residents who know their neighbours stay longer, participate more, and ask more of their neighbourhood.

Insight

Anonymised, aggregated signal about where families actually gather — and where provision is thin.

None of these require the city to build or maintain software.

FIT

A layer, not a replacement.

The city provides

Public space · Verified places · Family programmes · Events calendar

NestUp provides

Discovery · Attendance · Community · Local trust

Families get

Somewhere to go · Someone to go with · A neighbourhood that feels known

No procurement of software. No integration burden. No new system for staff to run.

THE ASK

One neighbourhood. Six months.

MONTH 1

Baseline

Choose one neighbourhood. Agree success measures and capture a starting baseline with the city's own data.

MONTHS 2-3

Seed

Onboard families through existing municipal touchpoints — tipot chalav, libraries, community centres.

MONTHS 4-5

Grow

Municipal events flow into the product. Parents host their own activities. Forums find their rhythm.

MONTH 6

Review

Joint review against the agreed measures. Decide together whether to extend, expand or stop.

One neighbourhood is deliberate. A pilot that can't fail teaches nothing.

ACCOUNTABILITY

How we'll know if it worked.

MEASURE	SOURCE	STARTING POINT
Attendance at municipal family events	City's own attendance records	Baseline set in month 1
Parent-initiated gatherings per month	In-product, reported monthly	Zero at start, by definition
Repeat participation	Share of parents attending more than once	Baseline set in month 1
Self-reported local connection	Short survey at month 1 and month 6	Baseline set in month 1
Reach into underserved areas	Distribution of activity across the neighbourhood	Mapped in month 1

We deliberately have no numbers to show you yet. Every baseline is set with the city, in month one.

WHY HERE

Why Tel Aviv should be first.

01

Density

Neighbourhoods dense enough that a 500-metre radius contains a real community.

02

Provision

The public space and family programming already exist and are genuinely good.

03

Appetite

A municipality with a track record of testing new things before anyone else.

04

Readiness

The product is live, in Hebrew and English, with 44 Tel Aviv places already verified.

The first city to do this gets to shape what it becomes.

WHAT WE NEED

Four things. None of them money.

1

A neighbourhood

One area, chosen with you, to run the pilot in.

2

Introductions

Access to existing family touchpoints — tipot chalav, libraries, community centres.

3

Event data

The family-facing events you already publish, so they appear where parents are looking.

4

A partner

One person inside the municipality who owns this with us for six months.

We bring the product, the team and the cost.

**Cities are built
from buildings.**

**Communities are built
from Tuesday mornings.**
